

TEC COLOR DOT CONTROL PERFORMANCE

Ink density measurement device that does not require a color bar

- Ink density measurement device for environments where it is difficult to install a color bar, such as curved surface printing, label printing, business form printing, etc.
- Ink density can be measured directly in the image area (halftone dots).
- Inline installation on existing printing presses is possible.
- By combining with our ink supply system (QRD), density control can be automated.

IMAGE

By simply capturing images of printed materials with a camera, the system compares the ink density at a specified position with the OK density already captured.

Distinctive technology and high-quality product !
